

# HAPPY RESIDENTS AND LOWER ENERGY COSTS. THAT'S COMFORTING.

INNCOM Energy Management Systems  
for Long-Term Care

**Honeywell**

# COMFORT AND CONTROL

Temperature and humidity control are critical to creating a comfortable environment. Giving residents a stylish, easy-to-use interface for climate control is essential to their satisfaction. For your residents, our e7 EMS thermostat delivers. For you and your staff, our INNcontrol™ 5 software allows you to monitor and control all of this and more, as well as gain data-based insights into in-room comfort, system status, and the health of your system components. With alerts delivered wherever you are via push notifications, managing resident facilities is that much easier.

## COMFORT BY THE ROOM.

For over 30 years, INNCOM systems have provided hospitality businesses with remarkable energy savings and industry-leading connectivity with cutting-edge IoT (Internet of Things) technologies such as lighting control, drapes and more, to provide guests with world-class experiences. With this expertise, we can customize an energy management system for your assisted living operation and save you meaningful costs without sacrificing resident comfort.

## THE BALANCE BETWEEN ENERGY SAVINGS AND COMFORT

**Saving energy in a room, suite or apartment while delivering a superior resident experience** starts with determining when the space is occupied. Motion detection is one of the easiest and most effective ways to determine if a person is present. Couple that with door switches that determine when a door is being opened or closed, or if it's been open or closed for too long, and you have the foundation of an Assisted Living Energy Management System (EMS).

When a living space is empty, our smart thermostats let the temperature drift

from the user-set temperature to a wider temperature range – a few degrees warmer or colder – before engaging the heating or cooling. This allows the unoccupied space's climate control to run more efficiently when it is empty and saves energy, while also allowing the room to quickly recover to the user-set temperature when the resident returns.

With secure dashboard access from your desktop or mobile device as well as mobile push notifications, our web-based IC5 application keeps your finger on the pulse of your property with alerts for you or your teams

on anything that needs attention.

**See in real-time which rooms are occupied, need maintenance, or require immediate action.**

The software monitors the energy use of each residence while processing data from your connected IoT devices. We even offer analytics on trends, issues and opportunities to improve energy savings and enhance the resident experience. It's precisely the insight you need for better-informed investment decisions, resident satisfaction, operational efficiencies and more.

# INTUITIVE AND EASY TO READ INNCOM E7 THERMOSTAT

Our latest INNCOM EMS thermostats greet guests with a sleek, modern design and an intuitive interface with a large, easy to read display. Each e7 model has a built-in motion sensor for energy optimization and wireless connectivity to Hospitality IoT devices – such as smart controls for lighting, drapes and other integrations. The battery-powered e7w is also available for easy installation.

## SCALABLE SOLUTIONS

The INNCOM platform is modular and expandable so you can step up your capabilities as you need them. An INNCOM EMS Thermostat with built-in motion sensor provides a standalone EMS with basic occupancy detection for energy savings without compromising resident comfort. Add a door sensor for advanced occupancy detection to gain additional energy savings. Integrated humidity control further optimizes comfort.

For resident-focused operations, climate control is just the start.

Honeywell is one of the world's leading developers of IoT technology, and the INNCOM platform works with a broad selection of third-party technologies like door locks, lighting, drapes and shades, and voice control.

For facilities without the dedicated on-site technical staff to support an energy management system, INNCOM Services are available to support you and help maximize your energy savings, reduce operational costs, and deliver a superior resident experience. With offerings including training, 24/7 technical support and more, getting the most out of your EMS has never been easier – or more cost effective.

# ENERGY EFFICIENCY DOESN'T HAVE TO BE UNCOMFORTABLE

**INNCOM SYSTEMS  
HAVE SAVED ENERGY IN  
NEARLY 2 MILLION ROOMS  
WORLDWIDE.**

To learn more about how a Honeywell INNCOM system can increase resident comfort while lowering resident HVAC costs, contact your INNCOM sales representative, or contact the INNCOM team:
