SAVE ENERGY AND ENERGIZE GUESTS

Take guestrooms from wonderful to whimsical, serious to sensual – at the push of a button

HIGHLIGHT YOUR DESIGNS

Defining your distinctive space takes attention to detail – selecting furnishings that embrace your guests, textures that delight, and color palates that inspire. Add the right lighting moods and scenes? Now your guestroom can really shine.

A complementary lighting scene can transport guests from your beautiful room to the home-away-from-home they've always dreamed of. And with a variety of lighting moods at guests' fingertips, a bright workspace can become a relaxing retreat or a romantic hideaway.

Whether your rooms have simple lighting control or more complex features like dimming, drapes, or color and tone control included as part of the scene, we can help you achieve design perfection with a variety of familiar user controls and customizable INNCOM switches and interfaces.

SWITCH TO SAVINGS

By integrating your lighting into an INNCOM energy management system (EMS), smarter room automation can help you save energy. Our thermostats can detect when guests are in the room or away, and wirelessly control the lighting to accommodate.

We can orchestrate a variety of schemes based on more than just a button push. We can create welcome scenes for check-in, or adjust dimming based on time of day. We can even incorporate guiding lighting that detects a waking guest at night and softly illuminates the way via gentle floor or cove lighting. And by connecting all of your in-room lighting

to an in-room automation controller, lights can turn off automatically when guests are away, reducing energy use.

The same automation logic that supports these scene profiles also enables easy wireless master-lighting control to help you sustain compliance with California Title 24 requirements while reducing wiring costs.

Our INNcontrol™ energy management supervisor software can give you insight into each light in every room, allowing you to monitor usage versus savings, and alerting staff of any issues via PC and mobile device with details on the light and the problem. You can also set maintenance alerts to notify staff to replace a light before it reaches its end-of-life, ensuring a flawless guest experience.

Typical master lighting scheme

FLEXIBLE, UPGRADABLE LIGHTING PLATFORM

Our wide assortment of standard lighting-control devices means that your room is lit perfectly, regardless of the lighting format. Wirelessly control fixtures and lamps behind the scenes, via INNCOM's Deep Mesh network.

DALI

DALI (Digital Addressable Lighting Interface) enables fine control of dimming and light color, as well as exceptional white-tone control. With up to 64 fixtures and 16 groups or scenes scenes at your command, a whole world of lighting options open up to transform your guestroom.

PC50X DALI module

Spectre™

Spectre receptacles and switches are an easy-to-install option for wireless or wired control. Lamps and other receptacle-based lighting can be controlled seamlessly via a wall switch, or automatically based on occupancy logic – which makes for easy California Title 24 compliance.

Spectre receptacle and switch

TOUCHABLE GUEST TOUCHPOINTS

From simple push buttons to sleek glass and every texture in between, we offer a host of standard and customizable wall-mountable controls to match any theme, décor or level of luxury.

MODEVA™ and MODEVA+

Our MODEVA and MODEVA+ lines of sleek, capacitive-touch glass controls are as easy to sanitize as they are to look at. Single-, double-, and triple-gang* controls, as well as integrated nightlight and slide-dimming options are available. Our new MODEVA+ offers an even sleeker frameless design. Choose from black, white or custom colors.

*Triple-gang not available for MODEVA+

ELEMENTS

Our ELEMENTS* line is offered in a variety of glass, metallic and textured finishes to match your décor, no matter what you draw your inspiration from. And it's available as a single- and double-gang switch or a longer combination plate for beautiful bedside controllers.

*British gang box applications only

ELEMENTS switch

EVORA

EVORA* offers an elegantly simple, traditional button interface with up to five buttons, plus customizable button labeling and backlighting as well as optional nightlights – all with the familiarity of standard Decora covers and plates.

*American gang box applications only

EVORA switch

Designer Series

Your solution for when your control plate materials are already selected, or you wish to mount your controls right into the millwork for a seamless execution. These tasteful switches feature customizable labels, backlighting, color and trim.
